

Idea section for directory area

Thoughts/Execution | is having a smaller directory to different parts of this page.

In browsing section, this would instead be the filtering part. At least, a simplified part. It would only be checking for your standard filters, like date released, rating, what have you.

Types of Directory, Home

- New Releases
- By new authors(book associated with account is first)
- Random books
- Socials(footer, basically)

Types of Directory, Browsing

- Views
- Rating
- Weight Rating(idk how to calc this, some formula with views and rating)
- ...more?
